Project Title: Freelance QA Projects via Upwork

Role: QA Engineer
Period: Dec 2022 – Apr 2023
Platforms: Web, Mobile (Android)
Type: Freelance / Remote

Project Overview:

Worked as a freelance QA Engineer on several short-term projects through Upwork, focusing on functional testing for websites and a mobile application designed for bill splitting among groups (e.g., in restaurants). These projects required close attention to usability, edge cases, and multi-device compatibility.

Key Responsibilities:

- Conducted multiple test cycles on general-purpose websites to verify functionality, usability, and layout across browsers and devices.
- Performed comprehensive manual testing of a mobile app used for splitting bills among friends, ensuring robust functionality and reliability in various real-life scenarios.
- Created and maintained structured test documentation, including detailed checklists and test cases tailored to app features and user flows.
- Executed tests covering various edge cases such as:
    - **Network conditions** (e.g., switching between Wi-Fi and mobile data, offline mode)
    - **Interruptions** (e.g., phone calls, notifications, app minimization)
    - **Data sharing scenarios** (e.g., sharing bill details between users)
- Identified, logged, and tracked bugs with clear reproduction steps and severity levels.
- Delivered concise and professional bug reports and testing summaries to clients.

Tools & Technologies:

- Test Documentation: Google Sheets, Microsoft Excel
- Bug Tracking: Google Sheets
- Platforms: Android, Chrome, Firefox, Edge
- Communication: Upwork Messaging, Email entries.
